Important safety information

⚠ WARNING

- Do not disassemble or modify the product. This may cause the product to not operate correctly, and you may suddenly fall and be seriously injured.
- **Check that the wheels are fastened securely before riding the bicycle. Using the axle release lever incorrectly may cause the wheel to fall off, etc. and lead to serious injury due to a fall.**
- This hub can only be used in combination with a special front fork and through axle. If it is used in combination with any other front fork or through axle, it may cause the wheel to become detached from the bicycle during riding and result in serious injury.
- Confirm that the axle release lever does not interfere with the disc brake rotor even when it is fully engaged. The axle release lever may interfere with the disc brake rotor if it is on the disc brake rotor side, which is dangerous. If the axle release lever interferes with the disc brake rotor, immediately stop use and contact the place of purchase or a distributor.
- For details on the E-THRU axle, refer to the E-THRU axle user's manual.

- For maximum performance we highly recommend SHIMANO lubricants and maintenance products.
