

Rear Freehub (for Downhill / Freeride)

IMPORTANT NOTICE

- Contact the place of purchase or a distributor for information on installation, adjustment, and replacement of the products which are not found in the user's manual. A dealer's manual for professional and experienced bicycle mechanics is available on our website (<https://si.shimano.com>).

For safety, be sure to read this "user's manual" thoroughly before use, follow it for correct use, and store it so that it can be referenced at any time.

The following instructions must be observed at all times in order to prevent personal injury and physical damage to equipment and surroundings. The instructions are classified according to the degree of danger or damage which may occur if the product is used incorrectly.

DANGER	Failure to follow the instructions will result in death or serious injury.
WARNING	Failure to follow the instructions could result in death or serious injury.
CAUTION	Failure to follow the instructions could cause personal injury or physical damage to equipment and surroundings.

Important safety information

WARNING

- Do not disassemble or modify the product. This may cause the product to not operate correctly, and you may suddenly fall and be seriously injured.
- **Downhill bicycle riding and freeriding are inherently dangerous activities. It is strongly recommended that riders wear protective head and body gear and perform thorough safety checks of their bicycles before riding. Please remember that you are riding at your own risk and that you have to consider your experience and your skills very carefully. There is a risk of being involved in an accident that can result in a serious injury or even death.**
- **Check that the wheels are fastened securely before riding the bicycle. You may fall or collide and be seriously injured.**
- Before riding the bicycle, you should carefully check your hubs to make sure that there are no cracks in the axles, and if you find any unusual conditions, DO NOT use the bicycle. This freehub is designed for downhill bicycle riding and freeriding. However, depending on the riding conditions, the hub axle could develop cracks which may cause failure of the hub axle. This can lead to an accident that could result in serious injury or even death.
- When installing the rear wheel to the frame, always be sure to follow the directions given in the manual for the frame. When the rear wheel is secured using the tightening torque, the rear wheel's rotation may become stiff; however, the instructions must always be followed. The securing method and tightening torque for the rear wheel both vary depending on the type of frame being used. Improper handling may cause the rear wheel to fall off and lead to serious injury.

Notice

- Do not lubricate the internal parts of the hub. Otherwise, grease will flow out.
- Products are not guaranteed against natural wear and deterioration from normal use and aging.
- For maximum performance we highly recommend SHIMANO lubricants and maintenance products.

Regular inspections before riding the bicycle

Before riding the bicycle, check the following items. If any problems are found, consult your place of purchase or a distributor.

- Are the wheels secure?
- Is it hard to rotate the wheels?
- Are there any abnormal noises?
