IMPORTANT NOTICE

• This dealer’s manual is intended primarily for use by professional bicycle mechanics. Users who are not professionally trained for bicycle assembly should not attempt to install the components themselves using the dealer’s manuals. If any part of the information on the manual is unclear to you, do not proceed with the installation. Instead, contact your place of purchase or a local bicycle dealer for their assistance.

• Make sure to read all instruction manuals included with the product.

• Do not disassemble or modify the product other than as stated in the information contained in this dealer’s manual.

• All dealer’s manuals and instruction manuals can be viewed on-line on our website (http://si.shimano.com).

• Please observe the appropriate rules and regulations of the country, state or region in which you conduct your business as a dealer.

• The Bluetooth® word mark and logos are registered trademarks owned by the Bluetooth SIG, Inc. and any use of such marks by SHIMANO INC. is under license. Other trademarks and trade names are those of their respective owners.

For safety, be sure to read this dealer's manual thoroughly before use, and follow it for correct use.

The following instructions must be observed at all times in order to prevent personal injury and physical damage to equipment and surroundings. The instructions are classified according to the degree of danger or damage which may occur if the product is used incorrectly.

⚠️ DANGER

Failure to follow the instructions will result in death or serious injury.

⚠️ WARNING

Failure to follow the instructions could result in death or serious injury.

⚠️ CAUTION

Failure to follow the instructions could cause personal injury or physical damage to equipment and surroundings.
TO ENSURE SAFETY

DANGER

Be sure to also inform users of the following:

Handling the battery

• Do not deform, modify, disassemble or apply solder directly to the battery. Doing so may cause leakage, overheating, bursting, or ignition of the battery.

• Do not leave the battery near sources of heat such as heaters. Do not heat the battery or throw it into a fire. Doing so may cause bursting or ignition of the battery.

• Do not subject the battery to strong shocks or throw it. If this is not observed, overheating, bursting, or fire may occur.

• Do not place the battery into fresh water or sea water, and do not allow the battery terminals to get wet. Doing so may cause overheating, bursting, or ignition of the battery.

• Use the Shimano specified charger and observe the specified charging conditions when charging the specified battery. Not doing so may cause overheating, bursting, or ignition of the battery.

WARNING

• Be sure to follow the instructions provided in the manuals when installing the product. It is recommended that you use only genuine Shimano parts. If parts such as bolts and nuts become loose or damaged, the bicycle may suddenly fall over, which may cause serious injury. In addition, if adjustments are not carried out correctly, problems may occur, and the bicycle may suddenly fall over, which may cause serious injury.

• Be sure to wear safety glasses or goggles to protect your eyes while performing maintenance tasks such as replacing parts.

• For information on products not explained in this manual, refer to the manuals provided with each product.

• After reading the dealer’s manual thoroughly, keep it in a safe place for later reference.

Be sure to also inform users of the following:

• Be careful not to let yourself be distracted by the cycle computer display while riding the bicycle. Otherwise, you may fall off the bicycle.

• Before riding, check that the wheels are secured. Otherwise, you may fall off the bicycle and be seriously injured.

• Be sufficiently familiar with how to start the power assisted bicycle before riding on busy streets. Otherwise, you may start the bicycle abruptly and have an accident.

• Make sure that the light is on during night riding.

• Do not disassemble the product. Disassembling it may cause injury to persons.

• When charging the battery while it is installed on the bicycle, do not move the bicycle. The battery charger’s power plug may not be completely inserted into the outlet, which may lead to fire.
Lithium Ion Battery

- If any liquid leaking from the battery gets into your eyes, immediately wash the affected area thoroughly with clean water such as tap water without rubbing your eyes, and seek medical advice immediately. If this is not done, the battery liquid may damage your eyes.
- Do not recharge the battery in very humid places or the outdoors. If this is not observed, electric shocks may result.
- Do not insert or remove the plug while it is wet. If this is not observed, electric shocks may result. If there is water leaking out of the plug, dry it thoroughly before inserting it.
- If the battery does not become fully charged after 6 hours of charging, immediately unplug the battery from the outlet and contact the place of purchase. Not doing so may cause overheating, bursting, or ignition of the battery.
- Do not use the battery if it has any noticeable scratches or other external damage. Doing so may cause bursting, overheating or problems with operation.
- The operating temperature ranges for the battery are given below. Do not use the battery in temperatures outside these ranges. If the battery is used or stored in temperatures outside these ranges, fire, injury or problems with operation may occur.
  1. During discharge: −10 °C - 50 °C
  2. During charging: 0 °C - 40 °C

Items related to installation to and maintenance of the bicycle

- Be sure to remove the battery and charger before wiring or attaching parts to the bicycle. Otherwise, an electric shock may result.
- Be sure to follow the instructions provided in the manuals when installing the product. It is recommended that you use only genuine Shimano parts. If bolts and nuts become loose or the product is damaged, the bicycle may suddenly fall over, resulting in a serious injury.
- Maintenance interval depends on the usage and riding circumstances. Clean regularly the chain with an appropriate chain cleaner. Never use alkali based or acid based solvents such as rust cleaners. If those solvent be used chain might break and cause serious injury.

Be sure to also inform users of the following:

- Observe the instructions in the user's manual for the bicycle, in order to ride safely.
- Periodically check the battery charger and adapter, particularly the cord, plug, and case, for any damage. If the charger or adapter is broken, do not use it until it has been repaired.
- Use the product under the direction of a safety supervisor or the directions for use. Do not allow physically, sensory, or mentally impaired persons, inexperienced persons, or persons with no required knowledge including children to use this instrument.
- Do not allow children to play near the product.
- If any malfunction or trouble occurs, consult the dealer nearest you.
- Never modify the system. This may cause a malfunction in the system.

Lithium Ion Battery

- Do not leave the battery in a place exposed to direct sunlight, inside a vehicle on a hot day, or other hot places. This may result in battery leakage.
- If any leaked fluid gets on your skin or clothes, wash it off immediately with clean water. Otherwise, the leaked fluid may damage your skin.
- Store the battery in a safe place out of the reach of infants and pets.
TO ENSURE SAFETY

NOTE

Be sure to also inform users of the following:

- Be sure to attach dummy plugs to any unused ports.
- For installation and adjustment of the product, consult a dealer.
- The units are designed to be fully waterproof to withstand wet weather riding conditions. However, do not deliberately place them into water.
- Do not clean the bicycle with a high-pressure washer. If water gets into any of the components, operating problems or rusting may result.
- Handle the components carefully, and avoid subjecting them to any strong shocks.
- Do not place the bicycle upside down. Doing so may damage the cycle computer or shift switch.
- Although the bicycle still functions as a normal bicycle even when the battery is removed, the light does not turn on if it is connected to the electric power system. Be aware that using the bicycle under these conditions will be considered non-observance of the road traffic laws in Germany.
- When carrying the bicycle in a car, remove the battery from the bicycle and place it on a stable surface in the car.
- Before connecting the battery, make sure that there is no buildup of water or dirt in the connector where the battery will be connected.
- When charging the battery while it is mounted on the bicycle, be careful of the following:
  - When charging, make sure there is no water on the charging port or the charger plug.
  - Check that the battery mount is locked before charging.
  - Do not remove the battery from the battery mount while charging.
  - Do not ride the bicycle with the battery charger mounted on.
  - Close the charging port cap when not charging.
  - Stabilize the bicycle to ensure that it does not collapse during charging.
- The use of a genuine Shimano battery is recommended. If using a battery from another manufacturer, make sure to carefully read the instruction manual for the battery before use.
- Some of the important information in this dealer’s manual can also be found on the device labels.
- The number found on the battery key is necessary when purchasing spare keys. Store it carefully.
- Use a damp cloth, with the water well wrung out, when cleaning the battery and plastic cover.
- If you have any questions about the use and maintenance of the product, consult the dealer where you made the purchase.
- Contact the place of purchase for updates of the component software. The most up-to-date information is available on the Shimano website. For details, refer to the "CONNECTION AND COMMUNICATION WITH DEVICES" section.
- Products are not guaranteed against natural wear and deterioration from normal use and aging.
- For maximum performance we highly recommend Shimano lubricants and maintenance products.

Connection and communication with PC

A PC linkage device can be used to connect a PC to the bicycle (system or components), and E-TUBE PROJECT can be used to carry out tasks such as customizing single components or the whole system and updating firmware.

- PC linkage device: SM-PCE1
- E-TUBE PROJECT: PC application
- Firmware: software inside each component

Connection and communication with smartphone or tablet

It is possible to customize single components or the system, and update firmware, using E-TUBE PROJECT for smartphones/tablets after connecting the bicycle (system or components) to a smartphone or tablet via Bluetooth LE.

- E-TUBE PROJECT: app for smartphones/tablets
- Firmware: software inside each component
Lithium Ion Battery

Disposal information for countries outside the European Union
This symbol is only valid within the European Union.
Follow local regulations when disposing of used batteries. If you are not sure, consult the place of purchase or a bicycle dealer.

Items related to installation to and maintenance of the bicycle

• Do not use thinner or other solvents to clean any of the components. Such substances may damage the surfaces.

• You should periodically wash the chainrings in a neutral detergent. In addition, cleaning the chain with neutral detergent and lubricating it can be an effective way of extending the useful life of the chainrings and the chain.

The actual product may differ from the illustration because this manual is intended chiefly to explain the procedures for using the product.

* The maximum speed up to which power assistance is provided is set by the manufacturer and is conditional on where the bicycle is to be used.
Installing the cycle computer

Installing to the handlebar

1. Pass the clamp band on the cycle computer over the handlebar.

   ![Diagram showing cycle computer and clamp band](image)

   (A) Clamp band
   (B) Cycle computer

2. Adjust the angle of the cycle computer so that it is easy to see, and then use a 3mm hexagon wrench to tighten the clamp bolt.

   ![Diagram showing angle adjustment and tightening](image)

   (A) Clamp bolt

<table>
<thead>
<tr>
<th>3 mm</th>
<th>0.8 N·m</th>
</tr>
</thead>
</table>

   **NOTE**
   Recommended installation angle of the information display: Between 15° to 35° to the horizontal.
Installing the assist switch

1. Pass the assist switch over the handlebar.

   ![Diagram](A) Handlebar
   ![Diagram](B) Assist switch

   Supported handlebars: Ø22.0mm/Ø22.2mm/Ø22.5mm

2. Adjust the attachment position and angle, and then use a hexagon wrench to tighten the unit fixing bolt.

   ![Diagram](A) Unit fixing bolt

   **Tightening torque**
   | 3mm | 2 - 2.2 N·m |

   **NOTE**
   Attach the lever in a position where it will not touch the brake lever when pushed all the way in.

3. Adjust the positions of lever [X1] and lever [Y1].

   ![Diagram](2mm) Lever fixing bolt

   **Tightening torque**
   | 2mm | 0.5 - 0.7 N·m |

   Loosen the lever fixing bolt using a 2mm hexagon wrench, and adjust the lever's position so that it is easy to push. After determining the position, tighten to the designated torque.
Connecting the electric wire

Set so that the projection on the connector is aligned with the groove in the narrow end.

(A) TL-EW02
(B) Plug

NOTE
Use the Shimano original tool for installation and removal of the electric wire. When installing the electric wire, do not forcibly bend the plug. It may result in a poor contact. When connecting the electric wire, push it in until it clicks in place.

Connect the electric wire to the assist switch

1. Remove the cable cap from the assist switch.
   (A) Cable cap

2. Pass the electric wire through the cable cap, and connect it to the assist switch.
   (A) Cable cap
   (B) Electric wire

NOTE
Make sure the electric wire is connected through the cable cap. If the wire is not passed through the cable cap, the electric wire connector may be damaged.
**INSTALLATION**

**Connecting the electric wire**

**3**

Install the cable cap.

When routing the electric wire along a cable built-in handlebar, run the wire along the guide of the cable cap then the handlebar.

When routing the electric wire in the direction of the stem

When using a cable built-in handlebar

(A) Guide

**Securing the electric wire (SC-E8000)**

Bind the brake horse (or brake outer casing) to the electric wire connecting the cycle computer and drive unit, using the band, as shown in the illustration.

(A) Electric wire of the cycle computer
(B) Brake horse (or brake outer casing)
(C) Band

The band is included in SC-E8000.
Installing the battery mount

Set in place the rubber spacers and metal spacer on the mount lower case and align the frame mounting holes with the bolt holes in the mount lower case.

(A) Key unit

Installing / removing the battery

**Installation of the battery**

**BT-E8010**

1. Align the indentation in the bottom of the battery with the protrusion on the mount and insert the battery.

2. Slide the battery to the right starting from the point where it is inserted. Push in the battery until you hear it click.

3. Return the key to the locking position, remove it, and store it in a safe place.

**NOTE**

- To prevent the battery from falling out, check to see that the battery is locked after installation.
- Before riding, make sure that the charging port cap is closed.
- To prevent the battery from falling out, do not ride the bicycle with the key inserted.
Insert the battery into the battery mount until there is a click.
- When inserted until a click is heard, the battery is locked automatically.

**NOTE**
- To prevent the battery from falling out, check to see that the battery is locked after installation.
- Before riding, make sure that the keyhole cap and charging port cap are closed.
- To prevent the battery from falling out, do not ride the bicycle with the key inserted.
Removing the battery

The following description may not be applicable as different types of keys are available.

BT-E8010

1. Turn off the power, then insert the key into the key cylinder in the battery holder.

   ![Key and Key Cylinder](image)

   (A) Key
   (B) Key cylinder

   **NOTE**
   - Hold the battery firmly and be careful that it does not drop when removing or carrying it.
   - The position of the key does not affect the insertion of the battery. You can insert it regardless of the key position.
   - You cannot remove the key when it is not in the inserting position.

2. To unlock the battery turn the key to the left until you feel some resistance.

3. Hold the upper part of the battery and slide it to the left to remove it.
BT-E8020
If using a battery cover manufactured by another company, remove the battery cover before removing the battery.

1. Remove the keyhole cap.

2. Insert the key into the key cylinder in the battery mount.

3. To unlock the battery, turn the key clockwise and push it in.

4. Remove the key from the key cylinder, close the keyhole cap, and detach the battery.

**NOTE**
- Support the battery with your hand when detaching to make sure that it does not fall out.
- Do not attach or detach the battery with the key left inserted into the key cylinder or the keyhole cap left open. The battery may be damaged from contact with the handle of the key or the keyhole cap.
Installing the speed sensor

1. Before installing the speed sensor, check that the clearance (a) between the speed sensor and the magnet unit will be within 3 to 17mm.

2. If the clearance is within the designated range, place the toothed washer between the speed sensor and the chain stay, then attach the speed sensor fixing bolt.

3. If the clearance exceeds 17mm, use a spacer to adjust it. Attach the speed sensor with the speed sensor fixing bolt.

(Tightening torque)

- 1.5 - 2 N·m
## Mounting the magnet

### Magnet mounting position

Mount the magnet so that its center is aligned over the apex of the triangle symbol.

### How to mount the magnet

1. Align the speed sensor and magnet unit as shown in the illustration.

   ![Illustration](image.png)

   - (A) Speed sensor
   - (B) Magnet unit
   - (C) Spoke

2. Tighten the fixing bolt with a screwdriver.

   ![Illustration](image.png)

   - (A) Fixing bolt

<table>

</tbody>
</table>
INSTALLING AND WIRING THE DRIVE UNIT
## Installing the drive unit

Route the cables before installing the drive unit.

1. Align the drive unit with the three mounting holes on the right side and left side of the frame.

   ![Diagram of drive unit alignment]

   **(A)** Mounting holes  
   **(B)** Drive unit

   **NOTE**
   Be careful not to pinch the cables with the frame or drive unit case.

2. First attach the drive unit fixing bolts (M8) to the right side.

   After this, attach the drive unit fixing bolts (M8) to the left side.

   Tighten the drive unit fixing bolts (M8) until the drive unit makes firm contact with the inside of the right side of the frame.

   ![Diagram of bolt attachment]

   **(y)** Front of bicycle  
   **(z)** Rear of bicycle

   Drive unit fixing bolts (M8) and nuts are not included with Shimano products. Use those supplied by the manufacturer. For information on the tightening torques, contact the manufacturer.
INSTALLING AND WIRING THE DRIVE UNIT

Drive unit wiring diagram

(A) Cycle computer port/ Rear derailleur port/E-TUBE port
(B) Dummy plug
(C) Speed sensor port

NOTE
Be sure to attach dummy plugs to any unused ports.

The cycle computer/rear derailleur ports can be used to connect the cycle computer or rear derailleur.
### Connecting the battery cable

#### Connecting to the drive unit

Align the arrow on the battery cable with the triangle symbol on the drive unit port and insert the battery cable.

Insert it until it locks into place.

![Diagram of connecting the battery cable](image)

(A) Battery cable  
(B) Drive unit port

#### Disconnecting from the drive unit

To remove the battery cable, hold it by the grooved part of its end and pull it towards yourself.

![Diagram of disconnecting the battery cable](image)
Connecting switches and the drive unit to the cycle computer

Use the TL-EW02 for connection.

---

NOTE

Be sure to attach dummy plugs to any unused ports.

The electric wire connector can be connected to any port of the cycle computer, but we recommend you connect the assist switch to the switch-side port.

Connecting the speed sensor to the drive unit

Connect the speed sensor unit electric wire to the drive unit speed sensor port using the TL-EW02.
Connecting the light cable to the drive unit

1. Remove the crank and drive unit cover and loosen the mounting bolts of the light connection terminals.

   ![Diagram](image1.png)

2. Attach the front light cable and tail light cable to the terminals and secure them with the mounting bolts.

   ![Diagram](image2.png)

<table>
<thead>

## INSTALLING AND WIRING THE DRIVE UNIT

### Installing the crank and front chainring

Perform the procedure below for all models, regardless of whether gear shifting is electrical or mechanical.

### 1

Align the wide part of the left crank arm with the wide part of the front chainring through axle and then attach.

(A) Wide groove area (left crank arm)
(B) Wide part (front chainring through axle)
(C) Left crank arm
(D) Axle spacer

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left or right is indicated on each crank arm. Check the L and R markings when installing.</td>
</tr>
</tbody>
</table>

### 2

Use the Shimano original tool to tighten the cap.

(A) TL-FC16/TL-FC18
(B) Cap

<table>
<thead>

</tr>
</thead>
<tbody>
<tr>
<td>0.7 - 1.5 N·m</td>
</tr>
</tbody>
</table>
INSTALLING AND WIRING THE DRIVE UNIT

Installing the crank and front chainring

3

Push in the stopper plate and check that the plate pin is securely in place, and then tighten the bolt of the left crank arm.

Tighten both bolts equally to the specified tightening torque (12 - 14 N·m).

(z) The illustration is of the left crank arm (cross-section)

(A) Plate pin
(B) Stopper plate
(C) Left crank arm

Tightening torque

<table>
<thead>
<tr>
<th>Thickness</th>
<th>5 mm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Torque</td>
<td>12 - 14 N·m</td>
</tr>
</tbody>
</table>

NOTE

- The two bolts should be tightened at the same time rather than each bolt being fully tightened separately.
- Set the stopper plate in the correct direction as shown in illustration.

4

Attach the drive unit cover.

Tighten the cover fixing bolts (M3) in the three locations.

(A) Cover fixing bolt (M3)

Tightening torque

+ #2

| Angle | 0.6 N·m |

5

If using a chain device, temporarily tighten the back plate to the mounting member of the front chainring.

(A) Back plate fixing bolt (M6)
(B) Back plate
INSTALLING AND WIRING THE DRIVE UNIT

Installing the crank and front chainring

6

Align the cutout in the front chainring with the wide area of the front chainring mounting member when attaching the front chainring.

(A) Front chainring (SM-CRE80-B)
(B) Chainring mounting member

NOTE
- Use the front chainring and chain device combinations specified in the table.

<table>
<thead>
<tr>
<th>Front chainring</th>
<th>Chain device</th>
</tr>
</thead>
<tbody>
<tr>
<td>SM-CRE80 (34T/38T Cl: 50mm)</td>
<td>Frame mount type</td>
</tr>
<tr>
<td>SM-CRE80 (44T Cl: 50mm Double chain guard)</td>
<td>-</td>
</tr>
<tr>
<td>SM-CRE80-B (34T/38T Cl: 53mm)</td>
<td>Drive unit mount type</td>
</tr>
</tbody>
</table>

- Note the difference between the front and back of the chainring. The front has a gear size (tooth number) marking.

Front

Back

7

Mount the chain on the chainring.

(A) Chain

NOTE
When mounting the chain, make sure to match chainring tooth thickness (thick/thin) and chain inner width (wide/narrow).
INSTALLING AND WIRING THE DRIVE UNIT

Installing the crank and front chainring

8

Determine the position of the guide according to the number of teeth on the crank.

Install the guide by temporarily tightening the guide fixing bolt (M5)

(y) 38T
(z) 34T

9

If using a chain device, after attaching the chain, rotate the back plate so that the clearance between the chain and the rubber band is 0-1mm.

Adjustment should be performed under the following conditions.
- Chain is engaging the smallest sprocket
- Rear suspension is fully extended

After adjustment, fully tighten the back plate and guide.

(z) 0 - 1mm

NOTE

If the chain and chain device interfere with each other when SM-CDE80 is used on a bicycle with Rear suspension at sag position, please adjust angle the chain device not to touch chain in the position of Low gear.

Tightening torque

<table>
<thead>

</tbody>
</table>
Tighten the lock ring by hand and attach the Shimano original tool.

While holding the left crank, tighten the lock ring in the direction shown in the illustration.

(A) TL-FC39/TL-FC36
(B) Lock ring

<table>
<thead>
<tr>
<th>Tightening torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>35 - 45 N·m</td>
</tr>
</tbody>
</table>

**NOTE**
- If using a torque wrench, use TL-FC39 in combination with TL-FC33.
- An impact wrench cannot be used.
- The lock ring has a left hand thread.
- Combine the Shimano original tools as in the illustration. Set TL-FC39 to TL-FC36 using the 2 installation holes on TL-FC39.
Installing the crank and front chainring

11

Install the right crank arm.

Use the Shimano original tool to tighten the cap.

![Diagram showing the right crank arm, cap, and axle spacer.]

**Tightening torque**

CHARGING THE BATTERY
CHARGING THE BATTERY

Proper use of the battery

The battery cannot be used immediately after purchase as it will be in deep sleep mode. Charging the battery with the dedicated battery charger will release the battery from deep sleep mode, allowing the battery to be used.

The battery can be used when the LED on it turns on.

The battery can also be released from deep sleep mode by connecting to E-TUBE PROJECT when the bicycle is fitted with all components.

Charging can be carried out at any time regardless of the amount of charge remaining, but you should fully charge the battery in the following cases. Be sure to use the dedicated charger to charge the battery.

- The battery is uncharged at the time of shipment. Before riding, be sure to charge the battery until it is fully charged.

If the battery has become completely discharged, charge it as soon as possible. If you leave the battery uncharged, the battery may deteriorate.

- If the bicycle will not be ridden for a long period of time, store it away with approximately 70% battery capacity remaining. In addition, take care not to let the battery become completely empty by charging it every 6 months.

- Do not connect to E-TUBE PROJECT while the battery is being charged.

The use of a genuine Shimano battery is recommended. If using a battery from another manufacturer, make sure to carefully read the instruction manual for the battery before use.

- Connect to E-TUBE PROJECT and click [Connection check] to confirm whether the battery in use is a genuine Shimano battery or another brand.
CHARGING THE BATTERY

Charging the battery

When charging the battery alone

Battery charger: EC-E6000
Battery: BT-E8010/BT-E8020

1. Connect the battery charger's power plug to the outlet.

2. Insert the charging plug into the battery's charging port.

   - BT-E8010

   - BT-E8020

(A) Charging port
(B) Battery

NOTE
Charge the battery on a flat surface indoors.
When charging the battery while it is mounted on the bicycle

Battery charger: EC-E6000
Battery: BT-E8010/BT-E8020

1. Connect the charger’s power plug to the outlet.

2. Insert the charging plug into the battery mount charging port.

- Place the battery charger on a steady surface such as the floor before charging.
- Stabilize the bicycle to ensure that it does not collapse during charging.
About the charger LED lamp

After charging has started, the LED lamp on the charger lights up.

You can check the current charging status on the battery level lamp located on the battery.

<table>
<thead>
<tr>
<th>LED Lamp Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lit up</td>
<td>Charging (Within 1 hour after the completion of charging)</td>

<td>Battery disconnected (1 hour or more after the completion of charging)</td>
</tr>
</tbody>
</table>

(A) Charger LED lamp

DANGER

Use the battery and charger combination specified by the company for charging and follow the charging conditions specified by the company. Not doing so may cause overheating, bursting, or ignition of the battery.

NOTE

If the bicycle is stored for an extended period of time immediately after purchase, you will need to charge the battery before using the bicycle. Once the battery is charged, it starts to deteriorate slightly.

</table>

*1: No light | : Lit up | : Blinking
CHARGING THE BATTERY

Turning the power ON / OFF

Press the power button on the battery.
The LED lamps will light up indicating remaining battery capacity.

NOTE
• When turning on the power, check that the battery is firmly attached to the holder.
• Power cannot be turned on while charging.
• Do not place your foot on the pedals when turning on.
  A system error may result.

• To force power off, hold down the power button for 6 seconds.
• If the bicycle has not moved for over 10 minutes, the power will automatically turn off. (Automatic power off function)
HOW TO OPERATE
ABOUT THE FUNCTIONS OF THE ASSIST SWITCHES AND SHIFT SWITCHES

*The battery level indicator blinks red when remaining battery capacity falls to this level.*
HOW TO OPERATE

Assist mode

Assist mode

Changing assist mode

Press X1 or Y1 to switch assist modes.

- **BOOST**: Assist boost
- **TRAIL**: Assist trail
- **ECO**: Assist eco
- **OFF**: Assist off
- **WALK**: Walk assist

- Short press X1
- Short press Y1
- Long press Y1
- Short press X1 (This operation is for canceling [WALK] mode)
Switching to [WALK] mode (walk assist mode)

1. With your feet off the pedals and current speed at [0 km/h], hold down Y1 until [WALK] displays.

   ![Diagram](image1)

   Y1 X1
   2 seconds

2. Release Y1 when [WALK] displays.

3. Hold down Y1 again to activate walk assist.
   • Walk assist remains active provided Y1 is being held down.

   • When [WALK] mode is canceled, the mode active before [WALK] mode was set, is re-activated.

### NOTE

A warning tone will sound while switching is in progress if it is not possible to switch to [WALK] mode because the current speed is not [0 km/h] or there is pressure on the pedals etc.

- If Y1 is not pressed for one minute or more, the mode active before [WALK] mode was set, is re-activated.
- If the bicycle is not moved after [WALK] mode is activated, walk assist is automatically inactivated. To re-activate [WALK] mode, momentarily release Y1 and then hold down Y1.
- The walk assist function can operate at a maximum of 6 km/h.
- The assistance level and speed vary with the gear position.
- The intelligent walk assist function activates when an electric shifting system such as XTR, DEORE XT SEIS is connected. System individually supplies assist power to detect gear position. “Intelligent walk assist” support rider more torque output in steep climb condition in lower side gears. “Quick walk assist” function works quickly by holding down SW from any mode.
HOW TO OPERATE

Switching between displayed traveling data

The type of traveling data displayed changes each time you press A.

(A) DST  ←  CLOCK (H)
(B) ODO  ↓  CADENCE (G)
(C) RANGE ↓  MAX (F)
(D) TIME  ↔  AVG (E)

(A) Traveling data display

NOTE

When traveling data is displayed, the screen returns to speed display after 60 seconds. When speed data is displayed, pressing A changes the traveling data displayed starting with [DST].

Holding down A when DST is displayed clears all traveling data.
Clearing the traveling distance

You can clear the traveling distance in the main screen.

1. Change the traveling data display to [DST] and press A for 2 seconds.

2. Release the finger when the [DST] indication starts blinking.
   In this state, pressing A again clears the traveling distance.

   - The [DST] indicator light stops blinking and the screen takes you back to the basic screen after leaving it alone for 5 seconds.
   - When the traveling distance is cleared, [TIME], [AVG] and [MAX] are also cleared.
About the setting menus

Accessing the setting menu

1

Hold down A when the bicycle is not moving to display the menu list screen.

2

Press X1 or Y1 to select the various menus.

Press A to display the setting screen for the selected menu.

(A) Clear
(B) Clock
(C) Bluetooth LE
(D) Bluetooth LE/ANT
(E) Light
(F) Brightness

(A) Clear settings
(B) Clock setting
(C) Bluetooth LE pairing
(D) Bluetooth LE/ANT connection status
(E) Turning the light on/off
(F) Display backlight brightness setting
(G) Turning the beep noise on/off
(H) Switching between km and miles
(I) Language setting
(J) Adjusting the electronic gear shifting unit
(K) Activating RD Protection Reset*
(L) Return to the main screen

* In order to protect the system from falling down etc., if the bicycle is subjected to a strong impact, the RD Protection function will operate and the connection between the motor and the link will be momentarily severed so that the rear derailleur can no longer operate. Executing RD Protection Reset restores the connection between the motor and the link, as well as the function of the rear derailleur.
HOW TO OPERATE

About the setting menus

Clear

Reset the traveling distance to default.

1

Press X1 or Y1 to select [DST].

1. Press X1 or Y1 to select [DST].

2. To reset traveling distance, select [OK] using X1 or Y1 and press A to confirm.

   After resetting, the screen will automatically return to the menu list screen.

   When the traveling distance is cleared, [TIME], [AVG] and [MAX] are also cleared.

   Item | Details
   ---- | ----------------------------------
   Exit | Return to the Setting menu screen
   DST  | Clearing the traveling distance

Clock

Configure the Clock setting.

1

Press X1 or Y1 to adjust the time.

1. Press X1 or Y1 to adjust the time.

2. Pressing A enables the set value and moves you to the minutes setting.

   You can change the numbers quickly by holding down X1 or Y1.

3. Press X1 or Y1 to set the minutes.

4. Pressing A enables the set value and takes you back to the Setting menu screen.
HOW TO OPERATE

About the setting menus

Bluetooth LE

E-TUBE PROJECT for smartphones/tablets may be used if a Bluetooth LE connection is established with a smartphone/tablet.

1. Before setting up a connection, turn on Bluetooth LE on the smartphone/tablet.

2. Open E-TUBE PROJECT and set it to listen for Bluetooth LE signals.

3. Press X1 or Y1 to select [Start].

   To start Bluetooth LE pairing, press A to confirm.

   If you press A during Bluetooth LE pairing, the transmission will be interrupted, then the screen will return to the menu list screen.

4. When connection is successful, SHIMANO STEPS logo is displayed on screen.

   If connection is not successful, a message indicating this is displayed.

   After successful connection or a connection failure, press one of X1/Y1/A or the screen will automatically return to the setting menu after awhile.

5. When connection is successful, the unit name will display in E-TUBE PROJECT.

6. Select the unit name displayed on screen.

   To disconnect, cancel the Bluetooth LE connection from the smartphone/tablet. (The cycle computer will exit connection mode and return to regular operation mode.)

---

Item | Details
---|---
Start | Starts Bluetooth LE pairing
Cancel | To not perform pairing, select [Cancel]

Generally, Bluetooth LE transmission will begin automatically when the cycle computer is turned on, however, pairing can be started by selecting [Start] from the [Bluetooth LE] menu when connectivity is poor.

(y) Connection successful
(z) Connection failed
**HOW TO OPERATE**

**About the setting menus**

**Bluetooth LE/ANT**

Current status of wireless connections can be displayed on screen. For details on ANT connection, refer to "ANT connection" in the section "About wireless functions".

Select [Bluetooth LE/ANT] from the menu list screen and confirm to display current wireless connection status.

- **(x)** When connected via Bluetooth LE
- **(y)** When an ANT signal is being emitted
- **(z)** When neither Bluetooth LE nor ANT is connected

---

**Light**

Configure the battery-powered light setting.

1. **Press X1 or Y1 to select the required setting.**

   - **Item** | **Details**
   - **ON** | Keep light always on
   - **OFF** | Keep light always off

2. **Press A to confirm the setting.**
   - After confirmation, the screen will automatically return to the menu list screen.
**Brightness**

The brightness of the backlight can be adjusted as needed.

1. Press X1 or Y1 to adjust the brightness.

The brightness can be adjusted in 5 levels.

2. Press A to confirm the adjusted value.

- After confirmation, the screen will automatically return to the menu list screen.

**Beep**

The beep noise can be turned on/off.

1. Press X1 or Y1 to select the required setting.

- Even when [Beep] is set to [OFF], a beep will sound when there is a misoperation, system error, etc.

2. Press A to confirm the setting.

- After confirmation, the screen will automatically return to the menu list screen.
**Unit**

Distance units (km/miles) can be switched.

1. Press $X_1$ or $Y_1$ to select the required setting.

2. Press $A$ to confirm the setting.
   - After confirmation, the screen will automatically return to the menu list screen.
Adjust

Gear shifting adjustment is performed with the electronic gear shifting unit.

**CAUTION**

- Improperly large adjustment may cause free spinning of the pedals during pedaling, resulting in an accidental fall.
- Perform adjustment only when gear shifting feels unusual. Under normal conditions, performing unnecessary adjustment may worsen gear shifting performance.

Open the Adjust screen and check whether the adjustment value is set to [0].

If the adjustment value is [0]

1. Press X2 or Y2 to adjust the adjustment value up or down by 1 speed.

2. Press A and after selecting [OK], adjust by rotating the crank.
   Shift gears to check whether the condition has improved.

**Gear shifting adjustment can only be performed when an electronic gear shifting unit is connected.**

**The settings have a range of -16 to 16.**
### HOW TO OPERATE

#### About the setting menus

<table>

</tr>
</tbody>
</table>

**3**

The condition has improved

Adjust the adjustment value by 1 speed in the same direction and check the gear shifting operation again.

Repeat these steps until any noise or unusual feeling disappears.

If the condition has improved, see "The condition has improved" to continue.

If the condition has worsened, see "The condition has worsened" to continue.

No apparent change

Adjust the adjustment value by 1 speed in the same direction and check the gear shifting operation again.

If the condition has worsened, see "The condition has worsened" to continue.

The condition has worsened

Adjust the adjustment value by 2 speeds in the opposite direction and check the gear shifting operation again.

Then, adjust the value by 1 speed in the same direction and check until any noise or unusual feeling is gone.

**4**

Finally, go for an actual ride and check for any noise or unusual feeling.

HOW TO OPERATE

About the setting menus

RD protection reset

In order to protect the system from falls etc., if the bicycle is subjected to a strong impact, the RD Protection function will operate and the connection between the motor and the link will be momentarily severed so that the rear derailleur can no longer operate. Executing RD Protection Reset restores the connection between the motor and the link, as well as the function of the rear derailleur.

1

Press X1 or Y1 to select [OK].

<table>
<thead>
<tr>
<th>Item</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK</td>
<td>RD Protection Reset will operate</td>
</tr>
<tr>
<td>Cancel</td>
<td>To not execute RD Protection Reset, select [Cancel]</td>
</tr>
</tbody>
</table>

2

Press A and after selecting [OK], recover the connection between the motor and the link by rotating the crank.

Exit

Closes the menu list screen and returns to the basic screen.

1

Press X1 or Y1 to select [Exit] on the menu list screen.

2

Press A to confirm.

After confirmation, the screen will return to the basic screen.

Update confirmation window for the drive unit settings backup data

The cycle computer has a function to automatically back up drive unit settings.
In the following cases, when the cycle computer power is turned on, a window confirming whether to update the backup data is displayed:

- Reinstalling the cycle computer on a bicycle with different settings
- If the drive unit settings have been changed via E-TUBE PROJECT

To update the drive unit settings select [Yes], to cancel update select [No].

If the settings cannot be accessed due to a drive unit malfunction, they can be accessed using E-TUBE PROJECT.
Error messages on the cycle computer

Warnings

This disappears if the error is fixed.

### Errors

If an error message is displayed on the entire screen, follow one of the procedures below to reset the display.

- Press the power switch of the battery.
- Remove the battery from the mount.

#### NOTE

If resetting does not solve the problem or the same problem occurs frequently, consult an agency.

CONNECTION AND COMMUNICATION WITH DEVICES
The system can be configured and firmware can be updated when the bicycle is connected to a device.

You need E-TUBE PROJECT to configure SHIMANO STEPS and update firmware.

Download E-TUBE PROJECT from our support website (http://e-tubeproject.shimano.com).

For information on how to install E-TUBE PROJECT, check the E-TUBE support website.

### FUNCTIONS

#### ANT connection

The wireless unit transmits the following information to the cycle computer.

- Battery level
- Front and rear derailleur gear positions
- Adjustment value

The latest functions can be checked by updating the software via E-TUBE PROJECT. For details, consult the place of purchase.

#### Bluetooth® LE connection

E-TUBE PROJECT for smartphones/tablets may be used if a Bluetooth LE connection is established with a smartphone/tablet.
How to make connections

ANT connection
ANT transmission will begin automatically when the cycle computer is turned on. To confirm whether connection was successful, check the [Bluetooth LE/ANT] menu.

Bluetooth® LE connection
Generally, Bluetooth LE transmission will begin automatically when the cycle computer is turned on, however, pairing can be started by [Bluetooth LE] menu when connectivity is poor.

2.4GHz digital wireless system
2.4GHz-frequency digital wireless technology, which is the same technology used for wireless LAN. However, on very rare occasions, objects and places may generate strong electromagnetic, waves and interference, which may result in incorrect measurement.

- Television, PC, radios, motors/engines, or in car and trains.
- Railroad crossings and near railway tracks, around television transmitting stations and radar bases.
- Other wireless computers or digitally controlled light.

Drive unit setting backup function for the cycle computer
To check the drive unit settings backed up to the cycle computer, export the PDF report from the E-TUBE PROJECT [Unit log acquisition] menu. When exchanging the drive unit, send the report along with the unit to your place of purchase or a local bicycle dealer.

CONNECTION AND COMMUNICATION WITH DEVICES

Connecting to the PC

When connecting only individual units

Connect SM-PCE1 to the connector of each unit.

NOTE

- When connecting only SW-E8000-L, you need SM-JC40/41.
- Individual units cannot be connected via wireless connection.

Connecting to the bicycle

Connect SM-PCE1 to an available port of the cycle computer.

(A) Assist switch
(B) Drive unit
CONNECTION AND COMMUNICATION WITH DEVICES

Connecting to the PC

When using electronic gear shifting

First, connect SM-JC40/JC41 to SM-PCE1.

Then, disconnect EW-SD50 from the center port of the cycle computer and connect it to SM-JC40/JC41.

(A) Assist switch
(B) Drive unit
(C) Shift switch
Replacing the clamp band

Remove the case fixing bolt with a 2.5mm hexagon wrench and replace the clamp band.

(A) Clamp band
(B) Washer
(C) Case fixing bolt

<table>
<thead>
<tr>
<th>Tightening torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.5 mm</td>
</tr>
<tr>
<td>0.6 N·m</td>
</tr>
</tbody>
</table>

NOTE

If using a handlebar with a thick diameter, reinstall it using the included Ø35mm clamp band.
# Replacing the front chainring

1. Perform procedures with the chain installed to the rear wheel. Attach the left and right crank arms using TL-FC16.

2. While holding the wheel, use the Shimano original tool to loosen the lock ring in the direction shown in the illustration.

   ![Illustration of the lock ring loosening process](image)

   - (A) TL-FC39/TL-FC36
   - (B) Lock ring

   **NOTE**
   - If using a torque wrench, use TL-FC39 in combination with TL-FC33.
   - An impact wrench cannot be used.

3. Remove and then replace the front chainring. To install a front chainring, refer to "INSTALLING AND WIRING THE DRIVE UNIT" and "Installing the crank and front chainring".

---

## Replacing the chain guard (SM-CRE80 44T Double chain guard)

Replace the chain guard as shown in the illustration.

![Illustration of the chain guard replacement](image)

- (A) Chain guard fixing bolt
- (B) Chain guard

**Tightening torque**

- 0.7 N·m
Replacing the guide of the chain device

Loosen the guide fixing bolt (M5) to remove the guide from the back plate, and then replace it.

(A) Guide
(B) Guide fixing bolt (M5)
(C) Back plate

NOTE
A chain device cannot be used with SM-CRE80 (44T CL: 50mm Double chain guard).
