Quick Release

What is a Quick Release?
The lever operates an internal cam that allows the wheel to secure easily and remove quickly.

Quick Release function
When the quick-release lever is brought to the CLOSE position, the lever nut moves inward. This force clamps the wheel to the frame and holds the wheel securely in place.

The clamping "force" is adjusted by turning the adjusting nut. When the nut is turned clockwise, the clamping force increases; when the nut is turned counter-clockwise the clamping force decreases.

Suitable dimensions of the fork end
Be sure to use only forks of suitable widths.

- Do not disassemble or alter this product.
- For safety, be sure to read this user’s manual thoroughly before use, and follow it for correct use.

**Important Safety Information**
For replacement information, contact the place of purchase or a bicycle dealer.

**WARNING**
- This wheel is equipped with a quick release hub to facilitate installation and removal. Failure to properly install this quick release hub (shod) onto your bicycle may cause the wheel to become detached from the bicycle while you are riding and result in serious bodily injury.
- Use a front fork which is equipped with a wheel retention mechanism.
- BEFORE USE, CAREFULLY READ THE QUICK RELEASE HUB INSTRUCTIONS IN YOUR OWNER’S MANUAL. If you have any questions, ask your dealer. IMPROPER HUB INSTALLATION CAN RESULT IN SERIOUS BODILY INJURY.

**NOTICE**
- Be sure to operate the quick release lever by hand only. Never use any other tool, such as a hammer, to tighten the quick release lever as this could damage it.
- Products are not guaranteed against natural wear and deterioration from normal use and aging.
- For maximum performance we highly recommend Shimano lubricants and maintenance products.

**WARNING**
- This is to inform you of the potential hazards and lifethreatening situations associated with the use of the product. You should read it carefully and understand the instruction because failure to follow its instruction could result in serious bodily injury, death, and/or property damage.

**CAUTION**
- Never disassemble or alter this product.
- Before riding the bicycle, check the following. If any problems are found with the products, contact the place of purchase or a bicycle dealer.

**THINGS TO CHECK BEFORE RIDING**
1. Always check your quick release hubs before riding to make sure that the wheels are correctly installed on the bicycle frame. This is especially important after you park your bicycle in a public place.

2. Make sure that the quick release levers are pushed fully to the CLOSE position. (The side of the lever with the inscription "CLOSE" must be facing away from the bicycle.)

As shown in the diagram, the lever properly swung from OPEN to CLOSE position. It must not be rotated like a nut on a bolt.

**Quick release lever position on rotor compatible hubs**
Install the quick-release hub through the front wheel so the lever is on the brake rotor side as shown in Figure 1. Bring the lever fully to the CLOSE position and check that it does not interfere with the rotor. (If the lever interferes with the rotor, re-install the quick release so its lever is on the side opposite the rotor.)

**WARNING**
- If the quick release lever is in the CLOSE position, the lever should be in parallel position with the fork (refer to Figure 2). This is to prevent foreign objects such as tree branches from getting caught during riding, which can cause the quick release lever to open and cause the wheel to release unintentionally from the fork.

**NOTICE**
- If the lever obstructs the fork blade, the lever may not close fully, nor properly secure the wheel. The wheel may fall off the bicycle during riding and serious injury may occur as a result.

- After reading the user’s manual carefully, keep it in a safe place for later reference.

**Operation**
The front hub axle is used as an example. The rear axle works in the same way.

**How to fasten the quick release hub**
1. Bring the quick release lever to the OPEN position and set the wheel so it firmly touches the interior of the fork end. (See sketch below)

2. Open and close the quick release lever with your right hand while gradually tightening the adjusting nut clockwise with your left. Continue tightening the nut until you feel resistance from the lever when it reaches parallel position with the hub (as indicated by the dotted line in the diagram below).

3. Grip the fork blade with your fingers and use the palm of your hand to apply force to the quick release lever. It should take considerable force against to tighten the lever completely. The word "CLOSE" inscribed on the lever should face out. The lever should be in front of, and parallel to the fork blade as shown in the diagram below.

**Quick release adjustment**

**WARNING**
- Check that no foreign objects have entered the quick release lever.
- Simply rotating the lever in a circular motion will not cause the wheel to release unintentionally.
- Check that the wheel is securely held to the frame.
- If the lever obstructs the fork blade, the lever may not close fully, nor properly secure the wheel.
- The wheel may fall off the bicycle during riding and serious injury may occur as a result.

**Quicker release adjustment**

**WARNING**
- Never disassemble or alter this product.
- Before using the quick release hub, be sure to carefully read the instructions in the user’s manual before use.
- IMPROPER HUB INSTALLATION CAN RESULT IN SERIOUS BODILY INJURY.

**THINGS TO CHECK BEFORE RIDING**

1. Turn the quick release nut 1/8th of a turn then push the lever to CLOSE position. Repeat this procedure until maximum clamping force is achieved by hand.

2. Lift up the bicycle so that the wheel is off the ground. Give the top of the tire a few sharp downward blows as shown in the diagram. The wheel should not be loose or come off. This check does not guarantee that the quick release lever has received adequate tightening torque.

3. If you are uncertain as to whether the quick release is tightened correctly, repeat the installation procedure as explained in "How to fasten the quick release hub" of this service instruction.

**QUICK CHECK**

**NOTICE**
- If the quick release will not adjust properly, please contact a professional dealer for advice.

**WARNING**
- BEFORE USE, CAREFULLY READ THE QUICK RELEASE HUB INSTRUCTIONS IN YOUR OWNER’S MANUAL. If you have any questions, ask your dealer. IMPROPER HUB INSTALLATION CAN RESULT IN SERIOUS BODILY INJURY.
