**Caliper Brake**

**Note**
- If using SHIMANO’s road brake shoes in combination with ceramic rims, the brake shoes will wear more quickly than normal.
- If the brake shoes have worn down until the grooves are no longer visible, contact the place of purchase or a bicycle dealer.
- Different brake shoes have their own characteristics. Contact the place of purchase or a bicycle dealer when purchasing the brake shoes.
- Products are not guaranteed against normal wear and deterioration from normal use and aging.
- For maximum performance we highly recommend Shimano lubricants and maintenance products.

**IMPORTANT NOTICE**
- Contact the place of purchase or a bicycle dealer for information on installation and adjustment of the products which are not found in the user’s manual. A dealer’s manual for professional and experienced bicycle mechanics is available on our website (http://si.shimano.com).
- Do not disassemble or alter this product.

For safety, be sure to read this user’s manual thoroughly before use, and follow them for correct use.

**Important Safety Information**
Guidelines that require replacement, contact the place of purchase or a bicycle dealer.

**WARNING**
- It is important to completely understand the operation of your bicycle’s brake system. Improper use of your bicycle’s brake system may result in a loss of control or a fall, which could lead to severe injury. Because each bicycle may handle differently, be sure to learn the proper braking technique (including brake lever pressure and bicycle control characteristics) and operation of your bicycle. This can be done by consulting your professional bicycle dealer and the bicycle’s owner’s manual, and by practicing your riding and braking technique.
- If the front brake is applied too strongly, the wheel may lock and the bicycle may fall forward, and serious injury may result.
- Always make sure that the front and rear brakes are working correctly before you ride the bicycle.
- The required braking distance will be longer during wet weather. Reduce your speed and apply the brakes early and gently.
- If the road surface is wet, the tires will skid more easily. If the tires skid, you may fall off the bicycle. To avoid this, reduce your speed and apply the brakes early and gently.
- Be careful not to allow any oil or grease to get onto the brake shoes. If any oil or grease does get on the shoes, contact the place of purchase or a bicycle dealer, otherwise the brakes may not work correctly.
- Check the brake cable for rust, fraying, and cracks, and contact the place of purchase or a bicycle dealer if any such problems are found. It this is not done, the brakes may not work correctly.
- After reading the user’s manual carefully, keep it in a safe place for later reference.

**Regular inspections before riding the bicycle**
Before riding the bicycle, check the following items. If any problems are found with the following items, contact the place of purchase or a bicycle dealer.

- Do the front and rear brakes work correctly?
- Does the brake cable have any rust, fraying, or cracks?
- Have the brake shoes worn down to the grooves?
- Are there any abnormal noises?

**Names of parts**

**Operation**
Move the quick release lever of the brake body to the open position before removing the wheel.
When installing a wheel, move the quick release lever to the open position. After installation, be sure to move the lever to the close position and check that the brakes work correctly before riding.
* The open/close positions for the quick release lever vary by model.
